ONVIF CONFORMANCE
OPEN NETWORK VIDEO INTERFACE FORUM COMPLIANCE

As a global company in the security industry, Cathexis Technologies takes pride in our user-friendly, internationally-recognised products and professional service. CathexisVision, our feature-rich video management solution, is ONVIF conformant. The Open Network Video Interface Forum (ONVIF), an international security industry forum, promotes standardisation and interoperability of IP-based products.

ONVIF conformance means that a product conforms with one or more ONVIF profiles, which specify the features it must have to be interoperable with other conformant products. Being on the authoritative ONVIF Conformant Product List, CathexisVision has met the technical requirements set by ONVIF.

CathexisVision's conformity with Profiles G and S make it easy to recognise its compatibility with other systems. ONVIF-S is the standard by which CathexisVision integrates with all ONVIF-compliant IP cameras and devices. ONVIF-G capability enables third-party systems to retrieve video from the CathexisVision system, facilitating integrations with building management, PSIMs and many other systems.

As an end user, you can trust that Cathexis is a member of and has been vetted by a global security industry standards-setter. CathexisVision's ONVIF conformance means that you can use it with other products that conform to the same ONVIF profile, enabling seamless communication between systems.

BENEFITS FOR CATHEXISVISION CUSTOMERS

Using conformant products can increase your company's market acceptance

Operational efficiency through ease-of-use with other conformant products

Contributing to the growth and professionalism of the security industry
