

UNIVERSAL INPUT MODULE – CAMECT FIRMWARE

The universal input module is a simple device to integrate third party devices to one another. Operating from low voltage USB supplies, it can be configured via Wi-Fi or ethernet connections. The Camect firmware allows you to switch Camect from normal to home mode via a voltage free input - from an intruder panel, access control system, NVR etc

Input voltage for power	Micro USB 5v only – not supplied
Current	Max 2.5amp (Camect firmware typical 300ma)
Size in mm	L105 x W75 x H35
Weight in grams	110
Input trigger via terminal connection	Voltage free (0v) polarity free
Active connection 1	Ethernet DHCP or Wifi
Active connection 2	HDMI (Diagnostics only)
Active connection 3	Red LED for power on
Active connection 4	Green LED for booting from SD card

All configuration and setup detail can be accessed from the following QR code:

All other information can be accessed via your Camect distribution channel.
