SMART SEARCH
CATHEXISVISION FEATURES

With CathexisVision's Smart Search tools, retrieving footage is quick and easy.

How Smart Search can help you

Scenario

A machine is missing from a construction site, and staff want to know when it was moved. Or, a security officer notices a bag left near a fire escape, and needs to find out when it was placed there.

Snap Search

Instead of scrolling through weeks of video, pinpoint the time of an incident.

Scenario

There was a report of a vehicle in an unauthorised area a few days ago. Or an administrator receives a notification that a parcel was delivered yesterday, and they want to know who received it.

Motion Search

View all the motion incidents that occurred in a user-defined area.

Scenario

An operator monitoring a business park overnight briefly steps out of the control room to get a cup of coffee. When the operator returns, the current camera scene does not show any activity.

Activity Trails

Click on a trail in the interactive overlay map to see footage of recent activity.

Scenario

While monitoring a camera or reviewing footage, an operator spots an incident on the monitors that they want to save for a later time.

Bookmarking

Recall events and camera layouts identified on live or pre-recorded footage.
