

URMET IPASSAN ACCESS CONTROL INTEGRATION

POWERFUL INTEGRATED SOLUTIONS FOR VIDEO MONITORING AND ACCESS CONTROL

A fully integrated video management and access control solution for multi-story residential accommodation

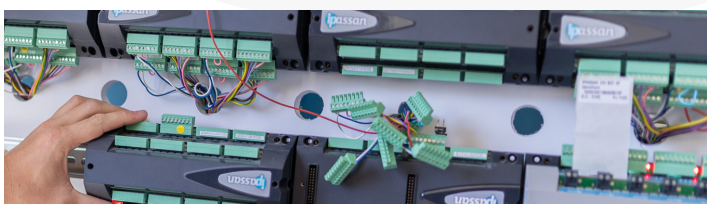

OVERVIEW

CathexisVision's integration with Urmet's IPassan IP Access Control system is designed specifically to meet the video management requirements of multi-level accommodation, with a large number of access points and devices, such as doors, gates, and elevators.

IPassan is a cloud-based IP Access Control system that is programmed using the web software tool, IPassan Manager. Access control events are sent from IPassan Manager to CathexisVision, which uses this information to trigger automatic CathexisVision actions such as camera recordings, and notifications to the base station.

With CathexisVision, records of every access control event can be safely stored, and easily viewed together with the video footage of the event. CathexisVision offers operators a streamlined and effective monitoring system for more informed decisions and quicker response times to suspicious activity.

Urmet IPassan has earned the highest level of Secured by Design accreditation for this specialised access control system, and Cathexis is proud to enhance this product with our powerful video monitoring and search tools, forensic storage, and intelligent analytics.

SUMMARY

PARTNER: Urmet
TYPE: Access Control
PRODUCT: IPassan
PACKAGE: CathexisVision 2022.2 or later

INTEGRATION CAPABILITIES

- Monitor CCTV cameras together with access control on a single system which provides video verification of access events.
- Search and filter the database to find access control events and associated video footage.
- Generate reports in CathexisVision on data received from Urmet IPassan.
- Add device to a site map.
- Create unique actions triggered by access control events, such as:
 - Record or control cameras
 - Send event info to local or off-site control rooms
 - Send email or SMS notifications
 - Play audio clips
